

## MUD FLOW TRANSMITTER (MFT)

The Mud Flow Transmitter (MFT) provides an instantaneous and highly accurate response to changes to flow volume in the return mud line. The sensor has been designed and built to withstand the harshest of operating environments, the body has been machined from a single block of stainless steel. Instantaneous and sensitive flow feedback derived from an absolute encoder. This simple but highly effective sensor is by far the most robust and critically reliable solution available on the market today.

### The sensor comes complete with the following:

- 3 paddle sizes
- Replacement body gasket
- Replacement torsion springs
- Tool kit

### Sensor options:

- Loop powered digital display c/w high - low set points and audio visual alarm
- DAQ module
